In total, there were 32 attendees to the event: 20 people in presence and 12 people online.

Description of event

On 16th November 2024, the University of Foggia hosted a significant event aimed at enhancing both digital and psychological resilience through peer networking, a crucial initiative under the DigiPsyRes ERASMUS+ project. The event brought together pre-service SEN teachers and other educational professionals, uniting them in a day of insightful presentations, in-depth discussions, and collaborative problem-solving, all set against the backdrop of ongoing challenges in today's digital era.

The day began with the registration of pre-service SEN teachers, ensuring that both in-person and online participants could engage seamlessly. As the seminar progressed, the opening session was marked by compelling speeches from esteemed figures in the field of education. Among them were Prof. Giusi Antonia Toto and Prof. Luigi Traetta from the University of Foggia, who, along with Marco di Furia from the Learning Sciences Institute and Giulio Esposito, Head of the International Office, laid a strong foundation by articulating the objectives and relevance of the DigiPsyRes project. They underscored the importance of preparing educators to navigate and mitigate the multifaceted challenges posed by crises, both in digital infrastructures and in fostering psychological resilience among students.

A central highlight of the event was the detailed exploration of the impact of COVID-19 on student well-being. Dr. Francesco Sulla, an expert in Educational and Developmental Psychology, presented a comprehensive analysis of the pandemic's effects, emphasizing the urgent need for strategies that support not only academic success but also the mental and emotional health of students. Building on this, Prof. Giusi Antonia Toto presented a needs analysis that mapped the current digital and psychological challenges faced by educators and students alike. Her insights provided a clear picture of the evolving landscape in education, where resilience and adaptability have become indispensable.

The seminar culminated in an engaging roundtable discussion and Q&A session, moderated by Marco di Furia. This segment provided a dynamic platform for participants to share experiences, discuss innovative tools, and brainstorm practical solutions aimed at ensuring that educational relationships remain robust even in times of emergency. The collaborative dialogue during the session highlighted various best practices and underscored the value of peer networking as a critical resource for overcoming the disruptions brought about by crises.

Overall, the event not only disseminated valuable information about the DigiPsyRes project but also fostered an environment where educators could collectively reimagine the future of teaching and learning in a digital age. The rich exchange of ideas and actionable recommendations emerging from the day are set to influence future strategies and policies, ensuring that both digital and psychological support systems within education are strengthened for times of crisis.
